WHAT IS CLAIMED IS:

5

10

- 1. A lighting device comprising:
 - (a) a plurality of LEDs disposed in a radial array about a vertical axis;
- (b) a central member having each LED mounted on a vertical surface thereof, the central member made of a thermally conductive material to conduct heat away from the LEDs; and
 - (c) a hollow member having a dentated surface, wherein the dentated surface surrounds the LEDs to diffuse the light emitted from the LEDs.
- 2. The lighting device of claim 1, further comprising a curved optical lens disposed about the vertical axis surrounding the hollow member, wherein the lens converges beams of light emanating from the hollow member in all horizontal directions.
 - 3. The lighting device of claim 1 having twelve or less LEDs.
 - 4. The lighting device of claim 1 having four LEDs spaced 90° apart in a common horizontal plane.
- 5. The lighting device of claim 1, wherein the LEDs have a driving current of about 1-5 Watts.
 - 6. The lighting device of claim 1, wherein the LEDs are enclosed in an airtight enclosure.
 - 7. The lighting device of claim 1, wherein the central member is made of metal.

5

20

- 8. The lighting device of claim 1, wherein the central member is in contact with a thermally conductive element, a portion of said thermally conductive element in contact with the air from outside of the lighting device.
- 9. The lighting device of claim 1, wherein the LEDs are secured to the central member using a thermally conductive adhesive.
 - 10. The lighting device of claim 1, wherein the central member has a centralized right angle prism with a square horizontal cross-section.
 - 11. The lighting device of claim 1, wherein the hollow member is made of an optically transparent, heat resistant material.
- 10 12. The lighting device of claim 1, wherein the hollow member is made of glass.
 - 13. The lighting device of claim 1, further comprising a light socket base electrically connected to the LEDs.
 - 14. The lighting device of claim 1 designed to fit within a fresnel lens of a navigational light.
- 15. A lighting device comprising:
 - (a) a lighting assembly having
 - (i) a heat sink having at least one centralized right angle prism with a square horizontal cross-section with a plurality of vertical surfaces,
 - (ii) a plurality of equispaced LEDs, each LED mounted on a vertical surface of the heat sink, and

5

- (iii) a tubular diffuser having a frosted surface, wherein the frosted surface surrounds the LEDs to diffuse the light emitted from the LEDs; and
- (b) a fresnel lens surrounding the lighting assembly;

whereby light emanating from the LEDs passes through the diffuser and the fresnel lens to provide a substantially uniform horizontal plane of light.

- 16. The lighting device of claim 13, wherein the heat sink has one centralized right prism with a square horizontal cross-section with four vertical surfaces.
- 17. The lighting device of claim 14 having one LED secured to each vertical surface.
- 18. The lighting device of claim 13 having four LEDs spaced 90° apart in a common horizontal plane.
 - 19. The lighting device of claim 13, wherein the LEDs have a driving current of about 1-5 Watts.
 - 20. The lighting device of claim 13, wherein the frosted surface of the diffuser faces the fresnel lens.
- 15 21. The lighting device of claim 13, wherein the frosted surface of the diffuser faces the LEDs.
 - 22. The lighting device of claim 13, wherein the lighting assembly further comprises a controller for regulating the polarity, voltage, and current limits of the electricity going to the LEDs.
- 20 23. A lighting assembly comprising:
 - (a) a plurality of equispaced high flux LEDs;

5

10

15

- (b) a controller for conditioning electric power for the LEDs;
- (c) a heat sink for transferring heat from the LEDs, wherein each LED is secured to the heat sink; and
- (d) a tubular diffuser surrounding the LEDs having a roughened surface with a random pattern of microfaceted angles on the surface, wherein the microfaceted angles diffuse the light emitted from the LEDs.
- 24. The lighting assembly of claim 23, further comprising a threaded light socket base electrically connected to the LEDs.
- 25. The lighting assembly of claim 23, further comprising an adapter for mounting the lighting assembly within a fresnel lens.
 - 26. The lighting assembly of claim 23, further comprising an upper base and a lower base, wherein the heat sink and the diffuser are mounted between the upper and lower bases.
- 27. The lighting assembly of claim 26, wherein the upper and lower bases are made of a thermally conductive material.
 - 28. The lighting assembly of claim 27, wherein the upper and lower bases are in thermal communication with outside air.
 - 29. The lighting assembly of claim 23 having an air circulation means for removing heat.
